

Actual training examples: waveform, spectrum, beats and intervals

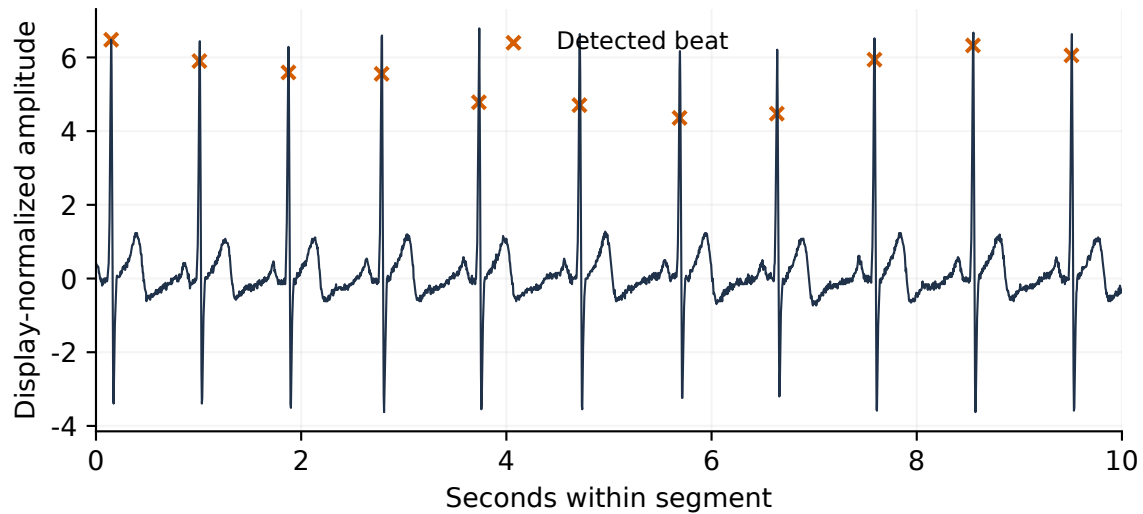

EEG · ISRUC-III-01 · epoch 37 · N2

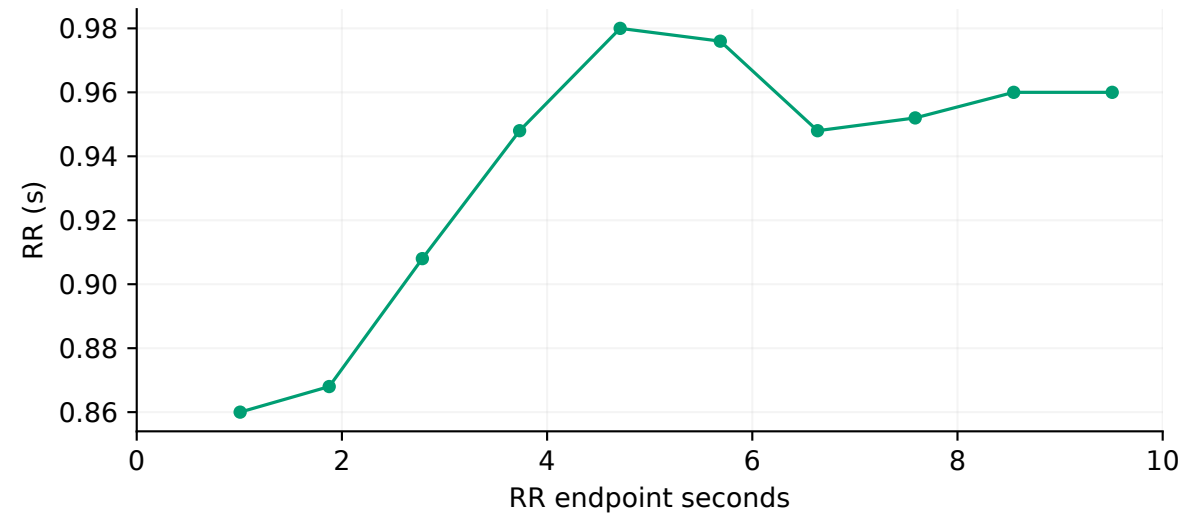

Same EEG epoch: 29×89 spectrum

ECG · MIT-slp01a · start 630 s

RR intervals = diff(detected beat times)

EEG and ECG are separate training examples, not a synchronized pair. Ten-second RR illustrates intervals; model HRV uses up to 300 s.
